subdialogues. Our system infers both the communicative actions that people pursue when speaking and the beliefs underlying these actions. Beliefs, and the strength of these beliefs, are recognized from the surface form of utterances, from discourse acts, and from the explicit and implicit acceptance of previous utterances. Our algorithm ...

4 Mixed initiative in dialogue: an investigation into discourse segmentation

Marilyn Walker, Steve Whittaker

June 1990 **Proceedings of the 28th annual meeting on Association for Computational Linguistics**

Publisher: Association for Computational Linguistics

Full text available:  pdf(480.62 KB)

[Publisher Site](#)

Additional Information: [full citation](#), [abstract](#), [references](#), [citations](#)

Conversation between two people is usually of MIXED-INITIATIVE, with CONTROL over the conversation being transferred from one person to another. We apply a set of rules for the transfer of control to 4 sets of dialogues consisting of a total of 1862 turns. The application of the control rules lets us derive domain-independent discourse structures. The derived structures indicate that initiative plays a role in the structuring of discourse. In order to explore the relationship of control and init ...

5 At home with the technology: an ethnographic study of a set-top-box trial

Jon O'Brien, Tom Rodden, Mark Rouncefield, John Hughes

September 1999 **ACM Transactions on Computer-Human Interaction (TOCHI)**, Volume 6 Issue 3

Publisher: ACM Press

Full text available:  pdf(438.27 KB)

Keywords: coordination and collaboration, domestic environment, ethnography, evaluation, interactive devices

6 Dialogue: User models: the problem of disparity

Sandra Carberry

August 1986 **Proceedings of the 11th conference on Computational linguistics**

Publisher: Association for Computational Linguistics

Full text available:  pdf(633.99 KB) Additional Information: [full citation](#), [abstract](#), [references](#)

A significant component of a user model in an information-seeking dialogue is the task-related plan motivating the information-seeker's queries. A number of researchers have modeled the plan inference process and used these models to design more robust natural language interfaces. However in each case, it has been assumed that the system's context model and the plan under construction by the information-seeker are never at variance. This paper addresses the problem of disparate plans. It present ...

Although talking is an integral part of collaboration, there has been little computer support for acquiring and accessing the contents of conversations. Our approach has focused on ubiquitous audio, or the unobtrusive capture of speech interactions in everyday work environments. Speech recognition technology cannot yet transcribe fluent conversational speech, so the words themselves are not available for organizing the captured interactions. Instead, the structure of an int ...
